**GLOBAL SOFTWARE APPLICATIONS INTRODUCES IPRINTHERE, A SELF SERVICE
PUBLIC PRINT STATION FOR WIRED AND WIRELESS USERS**

Location can charge or provide for free

Philipsburg, PA, June 06, 2007 –Global Software Applications (GSA) announced today a new product for public printing in hotspots or hotels. “iPRINTHERE” is a public print station, consisting of a Laser Printer and POS system. Its purpose is to capture the print jobs issued by wired or wireless users on the network and release the print job at the public print station after the owner of the print job entered their unique PIN#. To recoup the investment of the system and disposables of the printer the facility owner can choose to set a charge per print. iPRINTHERE is a Turnkey, Plug and Play package and is now for sale at <http://www.iprinthere.com>.

“The market has currently only one provider of printing for mobile users and their process is quite cumbersome for the user, who has to retrieve the print job, and for the facility, who is maintaining the service.” said Ron Koning, Vice President of Global Software Applications.

The iPRINTHERE station is in the same Hotspot or Hotel as where the user issues his print job. He only needs to enter his PIN# at the POS system. “iPRINTHERE fills a gap, by offering local print services to the wireless users” said Ron Koning, “And conveniently, the location can charge for the prints through the Credit Card Payment processing system that is part of the POS system.” iPRINTHERE is completely self service, there is no staff intervention needed.

iPRINTHERE is also digital signage enabled, which means that in idle the station can rotate local advertisements or announcements.

About Global Software Applications (GSA)

GSA, a privately held company based in Philipsburg, Pennsylvania, creates business center computer software (Internet Kiosk software) distributed by its dba SurferQuest. The company further specializes in custom-made software for Self-Service systems, Wayfinder and other dedicated applications.
